

Seawall height in Juno Beach

The elevation your city requires, the datum it is measured in, and the section of code that says so.

JUNO BEACH • PALM BEACH COUNTY

No minimum set in local code

Juno Beach's code has no seawall section and sets no seawall height. Seawalls appear only in the floodplain rules and the fertilizer setback.

The detail

MINIMUM	None found
FLOODPLAIN	In Zone V, bulkheads and seawalls need authorization from the appropriate federal, state or local authority, must stand clear of, and unattached to, buildings, and need a qualified registered design professional's analysis of floodwater diversion and wave run-up and reflection; no elevation is set - Sec. 7-27(h) (Ord. No. 687, 2016)
FERTILIZER	None within 10 ft of the top of a seawall or bulkhead, or 3 ft using a deflector shield, drop spreader or liquid applicator with a visible, sharply defined edge; new plantings may be fed in that zone only for 60 days, starting 30 days after planting - Sec. 12-155 (Ord. No. 736, 2021)
WHAT THE CODE COVERS	Searching the town code for seawall and bulkhead returns only the floodplain and fertilizer sections; the code has no seawall, bulkhead or dock chapter

Where this comes from: Town of Juno Beach Code of Ordinances (Municode), Ch. 7 Flood Regulations, Sec. 7-27; Ch. 12 Sec. 12-155

Verified: 2026-10. Rules change — check the date above against today.

Before you call a contractor

1 Know your datum

A height means nothing without the datum it is measured from. NAVD88 and MLW are different reference points and the same wall gives different numbers in each. Ask which one any quoted elevation refers to.

2 Get the existing elevation surveyed

You cannot tell whether a wall meets the requirement by looking at it. A surveyor shooting the top of the cap settles it in an hour.

3

Ask what triggers the requirement

Most cities only apply the minimum to new walls or to substantial repair. What counts as substantial is defined differently in each city, and it is usually a percentage of length or of cost.

4

Ask about building higher now

Several cities require a wall built below the final figure to be engineered so it can be raised later. Doing it once is cheaper than doing it twice.
